Why some say a CV Catheter is better than an AV Fistula

Some patients say...

“I am glad I chose a catheter, I have all the energy I need”

But the reality is... Catheters are Risky Business

“I feel so much better now that I can be out more with my friends and family. I couldn’t do this with a catheter”

Did you know... Patients who use a fistula report greater physical activity, energy, and emotional & social well-being compared to patients using a catheter.
